Comment on this article

Abstract: A paper-based interface for browsing video is proposed. A
paper document shows key frames selected from a video, a transcript for the parallel audio track, and bar codes that, when scanned, invoke a multimedia player. The paper document provides a stand-alone representation for a video recording that lets a user both understand the content of the file and replay only selected parts of the multimedia that are necessary to gain a better understanding. This approach applies the twodimensional...
